# Quality Laboratory Water Solution

QINGDAO INNOVA BIO-MEDITECH CO., LTD

## About Us

**Innova Bio-Meditech** is one of the leading global providers of laboratory and medical devices. Firmly committed to our mission of “sharing innovative bio-meditech solutions with the world”, we are dedicated to innovation in the fields of Biology Project, Life Science, Pharmacy Industry and Medical Treatment.

**Innova Bio-Meditech** possesses a sound distribution and service network with business partners in North and Latin America, Europe, Africa and Asia-Pacific etc. We have built up a well established R&D, manufacture network with 3 centers in Beijing, Qingdao, and Shanghai. Inspired by the needs of our customers, we adopt advanced technologies and transform them into accessible innovation. This means constant effort and research, in order to more fully understand the developments of the market, produce constantly upgraded product ranges by adding new products year after year.

*The passion for science*

# Water purification phase

# Pollutants in water

## ◉Inorganic salt (ion)

Interfering element analysis experiments, such as: titration experiments, IC, AA, ICP-MS (ten times lower than the detection limit), affecting cell culture and other biochemical and molecular biology experiments: cadmium is still toxic to cells at a concentration of 0.1ppb, Generate scale or crystals

## ◉Organic matter (TOC)

Encapsulate ion exchange resin, affect cell growth, interfere with HPLC (background, miscellaneous peaks...), nutrients for microbial growth, and generally affect molecular biology experiments

## ◉Microorganism

Affect biological and molecular biology experiments such as cell culture experiments

## ◉Particles, colloids

Block filters, disperse light, provide food and carriers for microorganisms

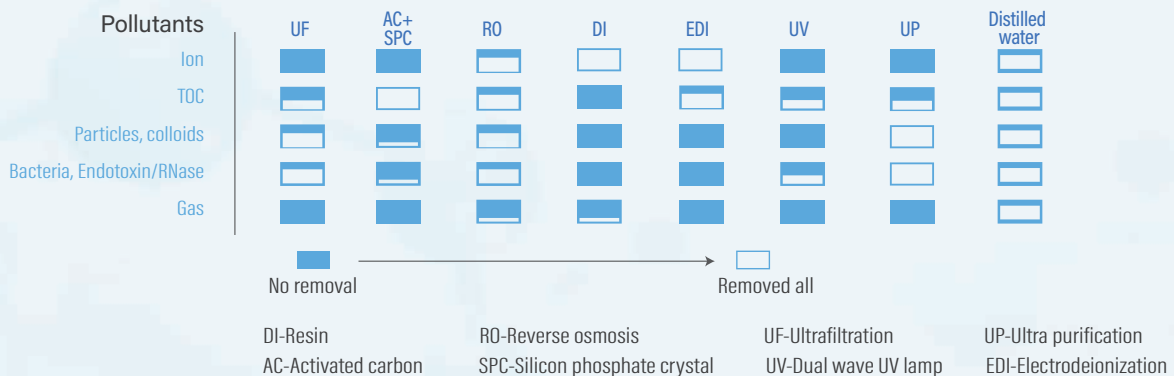

## ◉Heat source (endotoxin)/RNase, etc.

Cell culture and molecular biology will be affected

## ◉Gas:

The water also contains gas, but it has a very small impact on the experiment, and has a certain impact on individual optical experiments.

# Purification Technology

## Water system selection guide

Water Type	Application	Series
ASTM D1193 Type II water European pharmacopoeia purified water Japanese pharmacopoeia purified water ISO 3696 Grade 2 water JIS K 0577 A3 water Clinical Laboratory Reagent Water (CLSI)	Preparation of the buffer solution, microbial medium and reagents Cleaning materials (dishwasher), autoclave sterilizer, greenhouse Atomic absorption (depending on the resolution) Water peer crops Chemical industry (pure water) Pharmaceutical and cosmetic industry (purified water according to USP) Veterinary laboratory (purified water according to USP) Clinical analysis Salt fog room Climate room	<b>All-in-one system</b> Nova series: Nova EU10/EU15/EU20 Performa series: Performa EU10 Performa EU15/EU20 Classic series: Classic DU15/DU20/DU25 <b>Type II high purified water system</b> Performa series: Performa E10/E15/E20 Classic series: Classic D15 D20 D25

### Standard Specification for the American Society of Testing and Materials (ASTM) D1193-91 reagent grade water

Parameters	Type I*	Type II**	Type III ***	Type IV
Maximum conductivity( $\mu$ S/cm at 25 °C)	0.056	1	4	5
Resistance: Electrical Min. (M $\Omega$ .cm at 25 °C)	18	1	0.25	0.2
PH at 25 °C	—	—	—	5-8
Maximum TOC ( $\mu$ g/L)	10	50	200	No restriction
Maximum sodium ( $\mu$ g/L)	1	5	10	50
Maximum silica ( $\mu$ g/L)	3	3	500	No restriction
Maximum chlorine ( $\mu$ g/L)	1	5	10	50

\* A membrane filter of 0.2 micron is required

\*\*Prepared by distillation

\*\*\*Requires a membrane filter of 0.45 $\mu$ m

### 2006 CLSI Specification for Reagent Laboratory Water

Water Type	CLSI Specifications
CLRW (Clinical laboratory reagent water)	Maximum microbial content (CFU/mL) <10 Minimum resistivity 10 M $\Omega$ -cm, 25°C Free of particulates >0.22 $\mu$ m Organic materials (TOC)<500 ppb

# Pretreatment module

## Three water ports

Pretreatment module is device to pre filter tap water before it goes to main system. Depends on the quality of inlet water, service life can reach 2-3 years.

**In the back of module are three ports: water inlet, filtered water outlet and waste water outlet**

When working, the waste water outlet port will be closed. Inlet water will pass through the ultrafiltration membrane and out from filtered water outlet. When washing program running, a solenoid valve will turn on, water will go through the cartridge by pass filtered water outlet, flush the impurity on the surface of membrane, the dirty water directly discharges from the waste water outlet.

## Module inside & Ultrafiltration cartridge

Ultrafiltration membrane

Ultrafiltration cartridge

Timer

Solenoid valve

Water leakage detector  
Audible and visual alarm

### Ultrafiltration cartridge

10 nanometers pore size ultrafiltration membrane to remove completely colloids, particles, free chlorine and minerals

### Timer and Solenoid valve

The timer controls solenoid valve, can set washing times, factory default setting is once a day at 6 am for 10 minutes, or the system can be customized accordingly up to 15 times per day, every time 10 minutes.

### Example

Every morning, at 6 o'clock will start automatically a 10 minutes washing

program to make sure the water quality for your daily use. All waste water will be discharged, each time no more than 20L, but there is no need to worry about the waste. Considering the ratio of waste water of whole system is less than most brands, the waste water in RO module is 25% compared with 50% of others, while 75% water will be recycled, on the other hand, waste water in EDI Module just only 25%, so, the whole purification system, you will have 55% purified water, meanwhile, the lifetime of cartridges

and EDI module inside of the main machine will be extended.

**Total inlet : 100L per day**

**Proseers purified water  $(100-20)*75\%*75\% = 45L$**

**Others:**

**Purified water  $100 * 50\% * 50\% = 25L$**

### Feed water requirements

The quality of feed water will affect directly the quality of purified water and service life of equipment, if the tap water contains a high rate of hardness that do not meet the requirements, please use salty box to remove calcium ions and magnesium ion in advance.

# Three main purification cartridges

## Purification cartridges

### Pre-guard cartridge A

Filled with high-quality coconut shell activated carbon to effectively remove residual chlorine, macromolecular organics, colloids and heavy metal ions, etc.

### Pre-guard cartridge B

Filled with an appropriate amount of silicon phosphorus crystals to effectively reduce the hardness of feed water. Filled with wire wound filter elements to retain powder and floc impurities.

### Ultra purification cartridge B

Filled with electronic grade ion exchange resin, the ions in the water are controlled at ultra-trace levels. Advanced vertical flow purification method is adopted to ensure the service life and purification effect of purification cartridge, and reduce the use cost.

### How to detect the water quality ?

— Conductivity sensors equipped in four places to detect the water quality.

# Rapid installation of cartridges

—The Assembly and disassembly of cartridges is super easy, remove the cap and place it where it should be.

## Working capacity

Pre-guard cartridge A—25000L

Pre-guard cartridge B—25000L

Ultra purification cartridge A—15000L

# Two-stage RO module

- Depends on feed water quality, our two-stage RO module service life can reach 2-3 years, and the conductivity of RO water will be less than  $5\mu\text{S}/\text{cm}$  which can protect the running of EDI module and prolong its service life. Ratio of waste water is only 25% with recycle technology.

## Electrodeionization (EDI) system

# Water circulation before collecting

## Water circulation before collecting

- When collect type II water, the water in water tank flows back to the host, passing through circulation pump and dual wavelength ultraviolet lamp (254 and 185 nm) then outlet from the dispenser.
- When collect type I water, the water in water tank flows back to the host, passing through circulation pump, dual wavelength ultraviolet lamp and ultra purification cartridge then outlet from the dispenser. Meanwhile, a little bit of type I water will be divided to TOC analyzer module to evaluate the purity.

## Water pumps

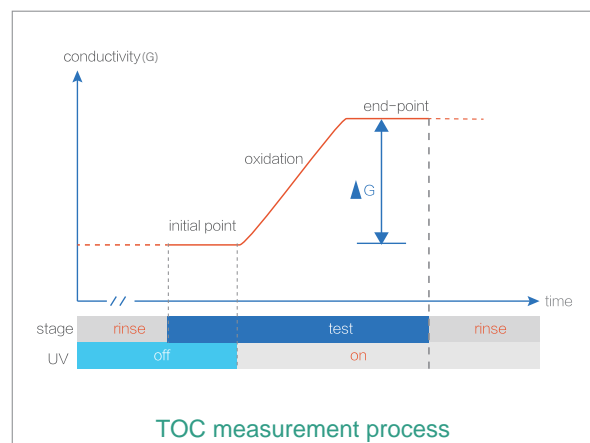

CE and NSF qualified water pumps, low noisy and stable working pressure.

## TOC analyzer

Total organic carbon (TOC) data will be shown on the display screen, evaluated by a built-in real on-line TOC analyzer module. TOC level of type I water is always less than 5ppb( $\mu\text{g/L}$ ).

## Dual wavelength UV lamp

# 60 liters PE water tank

- 254nm UV lamp, works 10 minutes every 5 hours to prevent growth of bacteria.
- 0.2µm inlet air filter to prevent air pollution.
- Pressure sensor to indicate the amount of water.
- Stepless water level adjustment on touch screen.

UV lamp

Air filter

Liquid level sensor

## Automatic wake-up program for RO and EDI

- When the purification system rests more than 24 hours, a wake-up program will start automatically to produce purified water in order to make sure the purification quality for your daily use.

## How to collect purified water?

- To collect Type II water by using water valve directly from the water tank

- Collect Type II and Type I water by using dispenser arms: dispense water by clicking the button to activate, by rotating the button to control the flow rate upto 2L/min, to stop dispensing by clicking the button again

- **Quantitative water dispense.** Click the flask icon, enter the amount in milliliters, save and press 'dispenser' to collect water, the collecting can be terminated by clicking "cancel"

- **Foot pedal** frees your hands, flow rate upto 2L/minutus need be setted in advance by rotating the button of dispenser arm (Standard)

## Remote dispenser arms

Two remote dispenser arms, one for Type II high purified water and one for Type I ultra purified water. Mounted with TFT touch screen for setting, operating and monitoring. The arm equipped with a point-of-use filter can move up and down, and it also can be rotated 360 degrees.

## Universal salt softener all laboratory use models

Control valve	Automatic
Regeneration mode	Flow time mixed type/time type
Volume	5L
Recommended flow	$\geq 0.5$ T/H
Pressure	0.15-0.5MPa
voltage	220V 50Hz
Inlet and outlet size	3/4" and 1"
Drain pipe size	$\phi 18$ mm
Salt valve	Yes
External dimension	230×450×485mm
Packing dimension	240×465×520mm

# Data record & WIFI service

## How to download data?

Built in using USB port to download the current data and historical data by connecting your USB drive

## Wifi function

Our Wifi function offers real-time remote monitoring service, in the settings menu, select wifi mode or 4G mode.

After connecting, users can check the running status of system at any time.

# Nova Zero-ion

***purification terminal and dispensing unit of Nova U and Nova EU series, providing ppt or sub-ppt ultrapure water for sensitive analyses such as trace and ultra-trace elemental analysis***

## ***Applications:***

- ICP-MS/ nano UHPLC/ nano LC-MS/ LC-ESI- MS/ GF-AAS analyses
- Detection and measurement of elements at ppt and sub-ppt levels in samples
- Trace and ultra-trace elemental analyses
- Electronic chip flushing
- Environmental testing, drug analysis, forensic medicine, food and beverage industry, etc.

## **Main features**

Compact design occupies less space, simple dispenser unit can be placed in super clean area to reduce contamination. Equipped with NFC chip recognition, internet of things technology, online real time U-cloud remote monitoring.

## ***Trace analysis ultra-purification cartridge***

- Unique cartridge with patented electronica grade resin, easy to replace
- Brand-new waterway design, more loading capacity and stable water quality
- Unique connection design, stronger pressure resistance, better tightness

## ***Outlet pipe support***

- Easy to place in any clean environment
- Integrated design, easy to clean, prevent the growth of bacteria
- Good chemical stability, suitable for any environmental conditions

## Intelligent human-computer interaction

- 5" LCD touch screen, animated icons, easy to operate

- Three-level access authorities, convenient laboratory management

ion_col	
Name	ion_col
Identification code	95437000
Installation date	2022-01-13
Running time	47Day
Volume	11000L

- Clear running status and information display

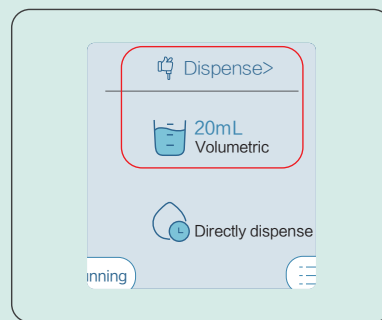

- Water quality report viewing and exporting function

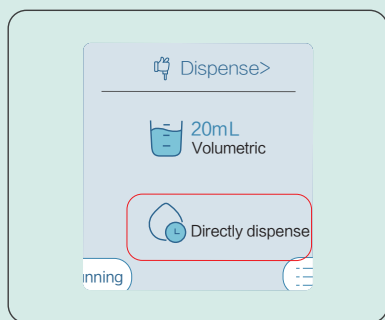

## Dispense control

- Flow rate control by Type I water dispenser arm, up to 2L/min

- Quantitative water dispense

- Directly dispense by click the icon

- Foot pedal frees your hands

# Central high purified water system

—Titan series is central high purified water system including pre-treatment system, main system and water tank.

## Pre-treatment system include

- Raw water pump
- Sand carbon filter, filled with activated carbon with stable performance to effectively remove residual chlorine and organic matter.
- Dual treatment of salt tank and resin softener to reduce the water hardness and remove water scale.
- Ultrafiltration membrane, PVDF material, nano-level filtration, remove particles, silt, colloids, microorganisms, etc. to ensure the safety and efficiency of the back-end purification components.

## Main system include

- CE and NSF qualified high pressure water pump
- Reverse osmosis membrane, rejection rate 95% -99% to remove organic matter, ions and particles.
- EDI module
- Water distribution pump
- Microporous filter membrane pipeline filter to prevent pipeline pollution caused by microorganisms and blockage by debris
- Dual wavelength (254nm & 185nm) UV-lamp to remove microorganisms including bacterial spores and non-pathogenic microorganisms

## SUS 304 stainless steel water tank

- Standard volume is 500L, can be customized upto 1 ton, 1.5 tons, 2 tons, etc. Equipped with 254nm UV lamp and 0.2μm inlet air filter

## How to collect purified water?

- Water supply port, directly distribute the purified water into all inlet pipeline of building
- Purified water outlet for temporary water collecting

# —Nova-Smart

## Nova EU10 / Nova EU15 / Nova EU20

### Unique features

### All-in-one system

- ◎ All-in-one system for ASTM Type I & Type II water/Clinical laboratory reagent water (CLSI)
- ◎ Real on-line TOC analyzer with 185nm UV-lamp inside
- ◎ EDI module imported
- ◎ Dual wavelength UV-lamp 254nm & 185nm
- ◎ Two (Type I & Type II) remote water dispenser arms with touch screen display
- ◎ U-cloud platform for remote monitoring (Wifi module)
- ◎ USB access port for data logging

## Water Flow Chart

- |                                 |                              |                                |

## Performa E10 / Performa E15 / Performa E20

### Unique features

- Integrated water dispenser arm
- China made EDI self-developed
- U-cloud platform for remote monitoring (Wifi module)
- USB access port for data logging

ASTM Type II high purified water system  
Clinical laboratory reagent water (CLSI)

### Nova C300 / Nova C500 / Classic C300 / Classic C500

#### Nova-Unique features

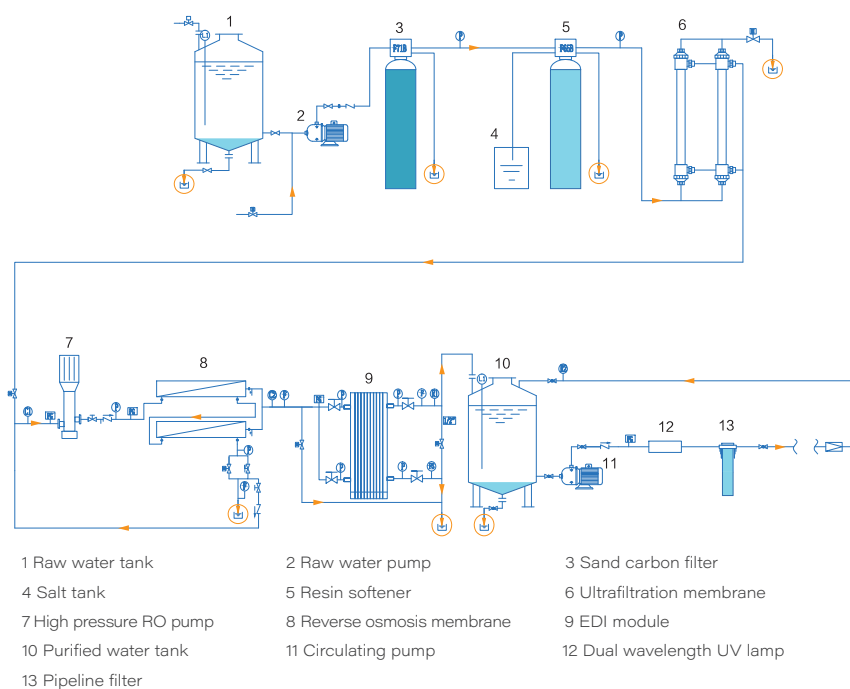

- EDI and water pumps original imported
- ASTM Type II / Type I purified water system
- Pre-treatment module
- 500L stainless steel water tank
- Productivity rate 300L/500L
- TFT touch screen controller
- U-cloud platform for remote monitoring (Wifi module)
- USB access port for data logging

#### Classic-Unique features

- China made high quality customized EDI and pumps
- ASTM Type II / Type I purified water system
- Pre-treatment module
- 500L stainless steel water tank
- Productivity rate 300L/500L
- TFT touch screen controller
- U-cloud platform for remote monitoring (Wifi module)
- USB access port for data logging
